

“Digital services in Railway-Signaling, by Siemens”

Smart Maintenance Conference, September 05, 2017 | Winterthur

Siemens Mobility Services

we design mobility since 1881

SIEMENS
Ingenuity for life

Berlin 1881: Operation and Maintenance of the first electrical tram

FAHRPLAN	
der	
Electrischen Eisenbahn	
in. Groß-Lichterfelde	
zwischen dem Bahnhof der Anhaltischen Eisenbahn	
und der Haupt-Kadetten-Anstalt.	
Vom 10. Mai 1881 ab täglich bis auf Weiteres.	
Abfahrt von der Haupt-Kadetten-Anstalt:	Abfahrt vom Bahnhof Groß-Lichterfelde:
6. ⁰⁰ Morgens.	6. ⁰⁰ Morgens.
7. ¹⁵ "	7. ¹⁵ "
7. ³⁰ "	8. ³⁰ "
9. ³⁰ "	12. ¹⁵ Mittags.
12. ³⁰ Mittags.	1. ¹⁵ Nachmittags.
2. ¹⁵ Nachmittags.	2. ³⁰ "
3. ³⁰ "	3. ⁴⁵ "
4. ⁰⁰ "	4. ⁵⁵ "
5. ⁰⁰ "	5. ⁵⁵ "
6. ³⁰ "	7. ⁰⁰ Abends.
8. ³⁰ Abends.	8. ⁴⁵ "
10. ⁰⁰ "	11. ⁰⁰ "
Fahrzeit für die ganze Strecke 10 Minuten.	
Siemens & Halske, Berlin.	

History

Winterthur 2017: Data support operation/maintenance within the railway

Today and tomorrow

Our service offerings serve the whole Mobility portfolio

With a set of portfolio elements and service contracts for your requirements

Whatever your rail business is ...

Mainline Transport (CS MLT)

High Speed trains

Commuter trains

Locomotives

Mobility Management (CS MM)

Rail Automation

Urban Transport (CS UT)

Metros + APM

Light Rail

Passenger Coaches

Turnkey Projects & Electrification (CS TPE)

Rail Electrification

... our offerings
serve your needs!

Digital Services

- Smart Monitoring
- Smart Data Analysis
- Smart Prediction
- Smart Security
- Smart Guidance

Digital Services as one element of the entire Mobility Software and Digitalization portfolio

Digitalization

Mobility Software

Timetabling & Capacity Planning
'NextGen' Train Control SW
Extended Rail Operations Control
Road Traffic Software (TM aaS)
(SDV) Fleet Management SW

SiMobility Connect Platform
(Intermodal) Journey Planning
Electronic / Mobile Ticketing
Passenger info/assistance SW
Train IT / Always Connected

Mobility Digital Services

Topic of today!

Smart Monitoring
Smart Data Analysis
Smart Prediction

Smart Security
Smart Guidance

Based on Railigent® Platform

MindSphere – the IoT operating system

Automation

Electrification

Digitally enhanced fleets and field equipment

Highly & fully automated driving rail
Highly automated yards / freight
Distributed wayside architecture / Interlocking in the cloud

Holistic IT Security Concept

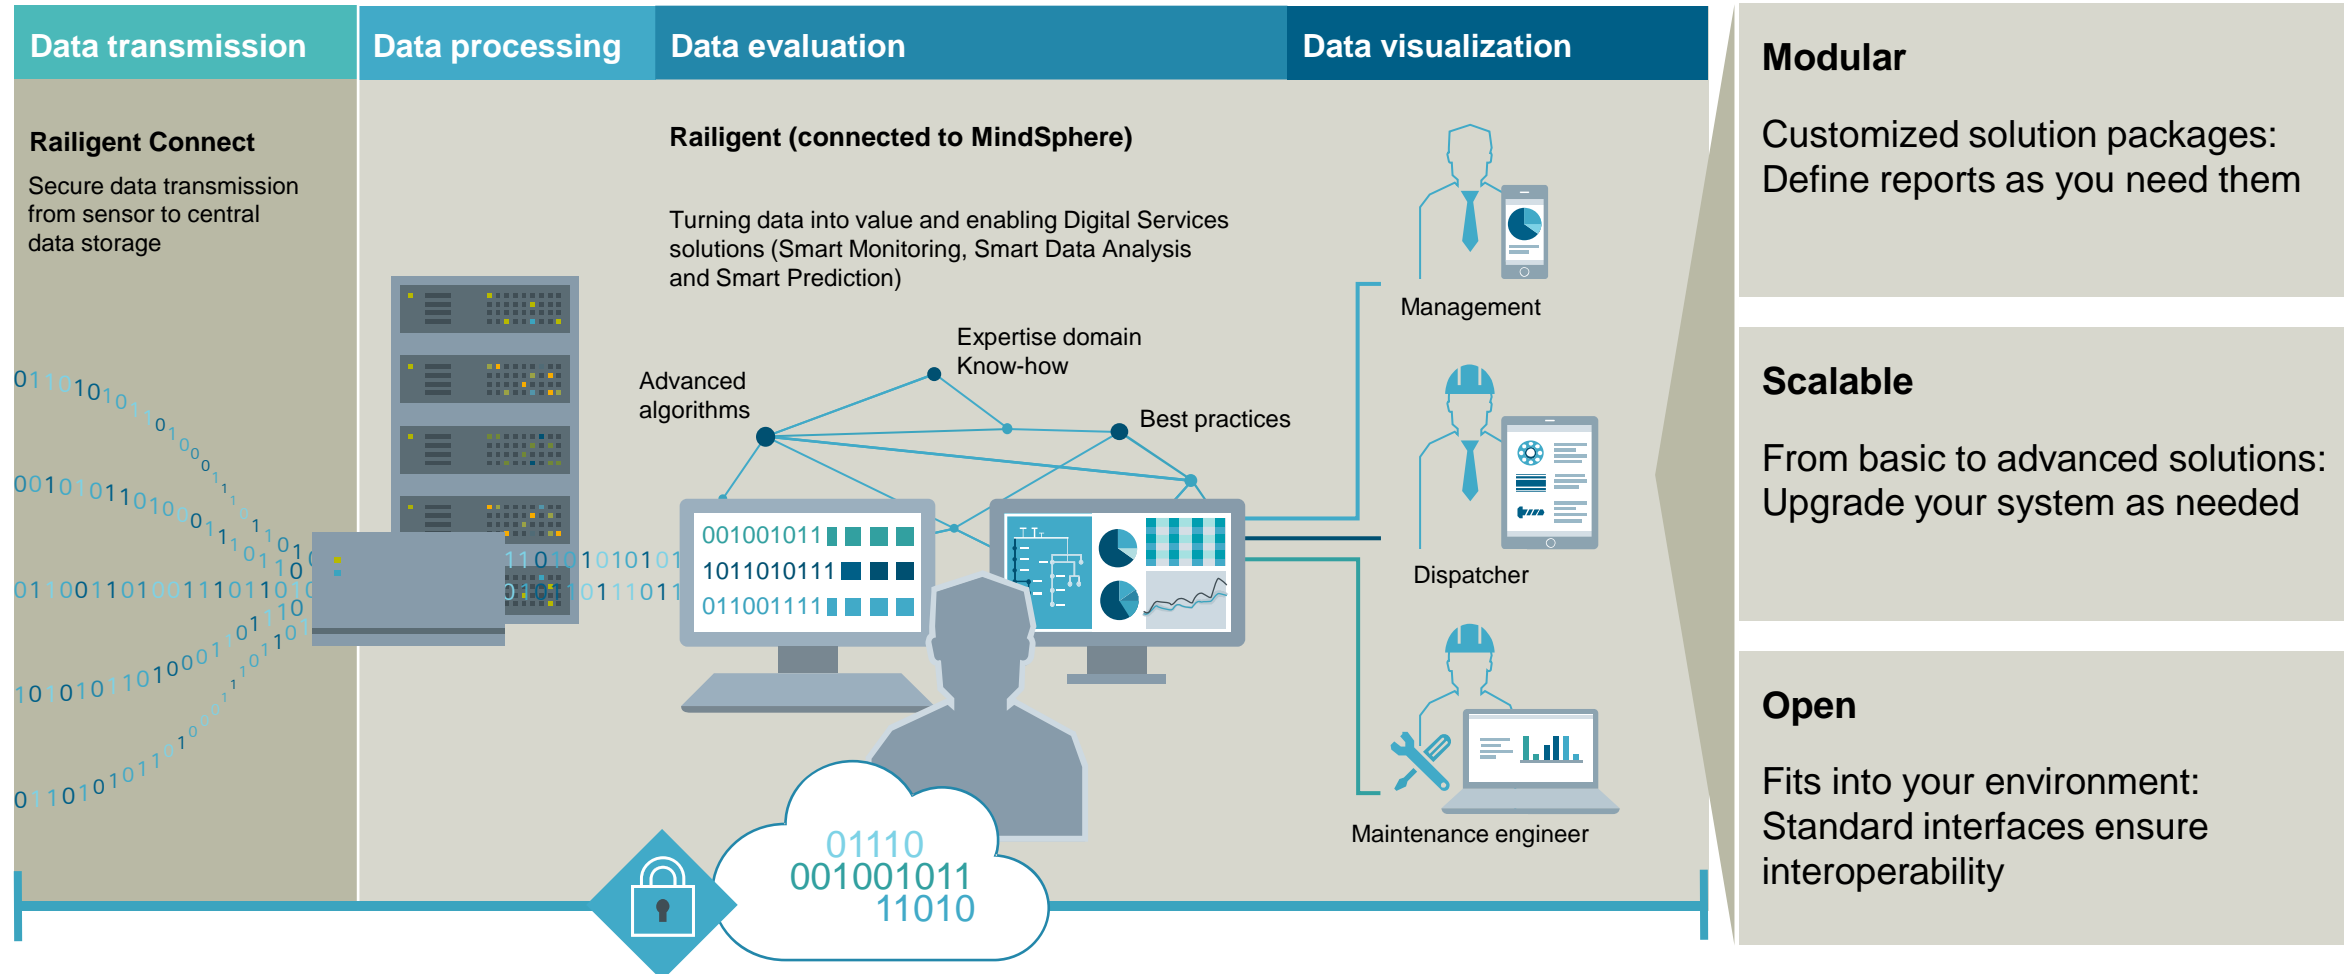

SIEMENS
Ingenuity for life

Energy consumption reduction

The diagram illustrates a sequence of 10 steps, each represented by a pair of padlocks (one red, one yellow) and a 2x2 grid of binary digits (00, 10, 01, 11). The padlocks are shown in different states (locked/unlocked) across the steps. The background features a cityscape and a train.

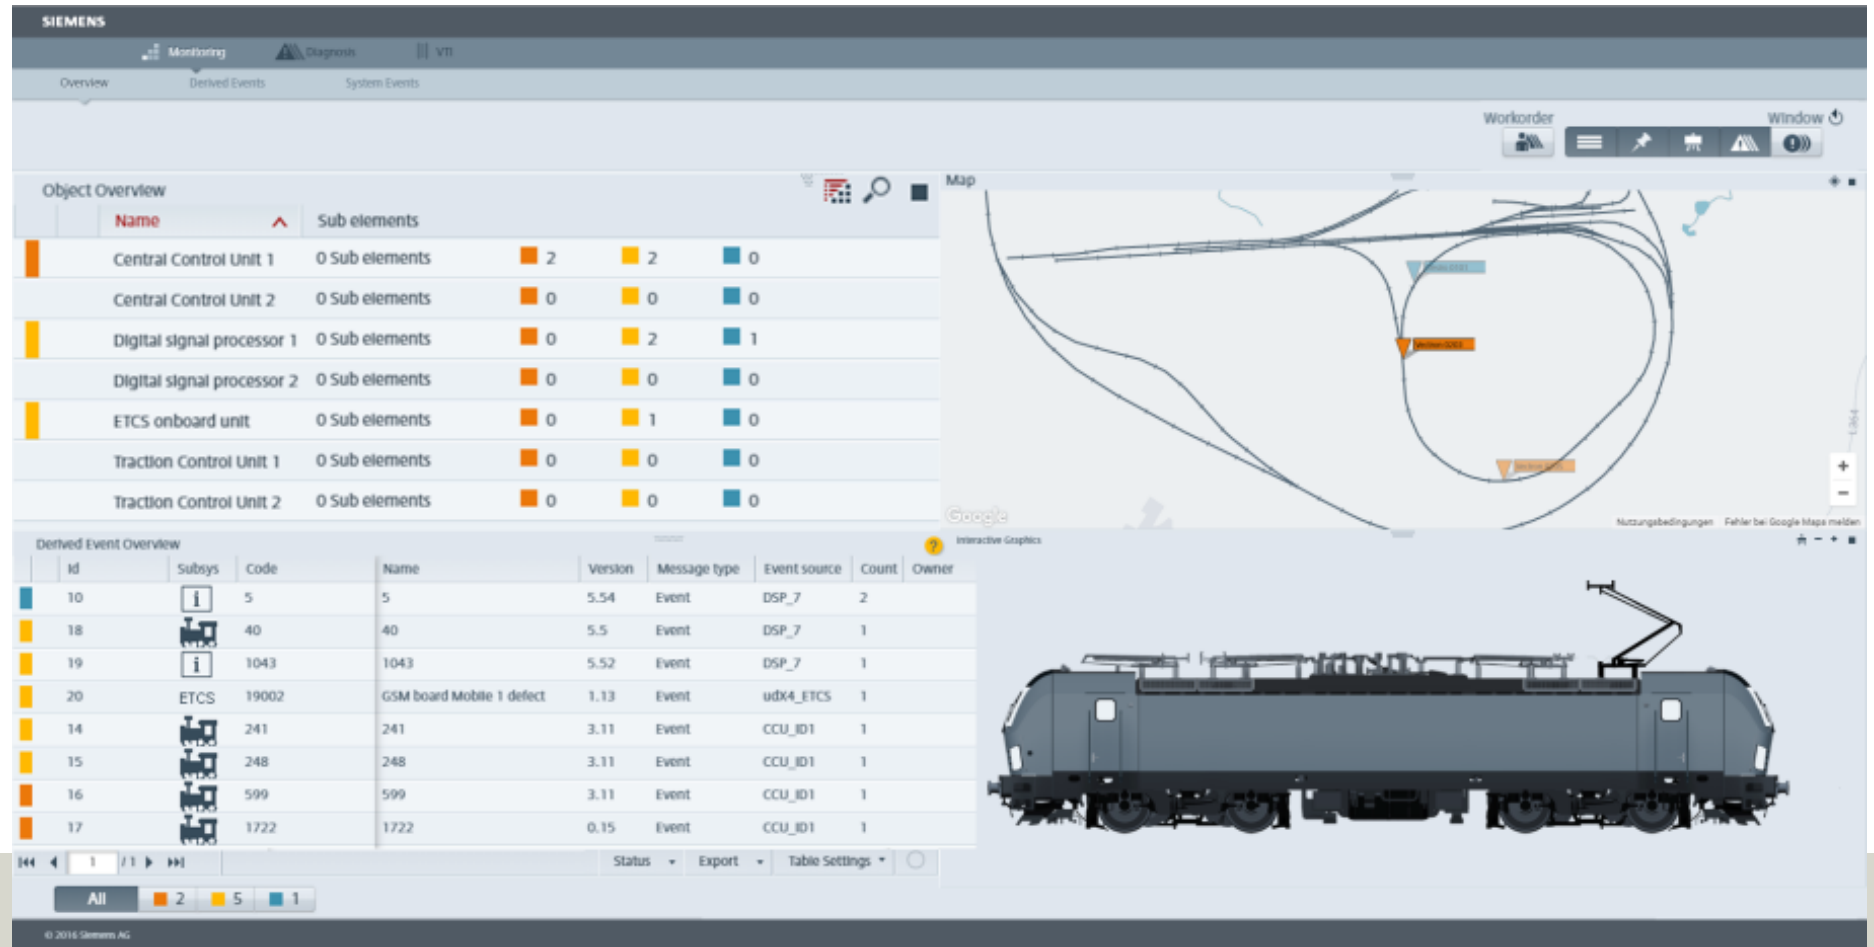

Step	Red Padlock	Yellow Padlock	00	10	01	11
1	Locked	Locked	00	10	01	11
2	Locked	Locked	00	10	01	11
3	Locked	Locked	00	10	01	11
4	Locked	Locked	00	10	01	11
5	Locked	Locked	00	10	01	11
6	Locked	Locked	00	10	01	11
7	Locked	Locked	00	10	01	11
8	Locked	Locked	00	10	01	11
9	Locked	Locked	00	10	01	11
10	Locked	Locked	00	10	01	11

Railigent® – The platform to manage rail assets smarter, covering the entire chain from data transmission to action recommendations

Smart Monitoring – Data Visualization – User Interface example – Dashboard for Rollingstock

The Dispatcher receives
all **relevant information**
via a dashboard to
initiate **corrective maintenance**
at an **early stage**
where required

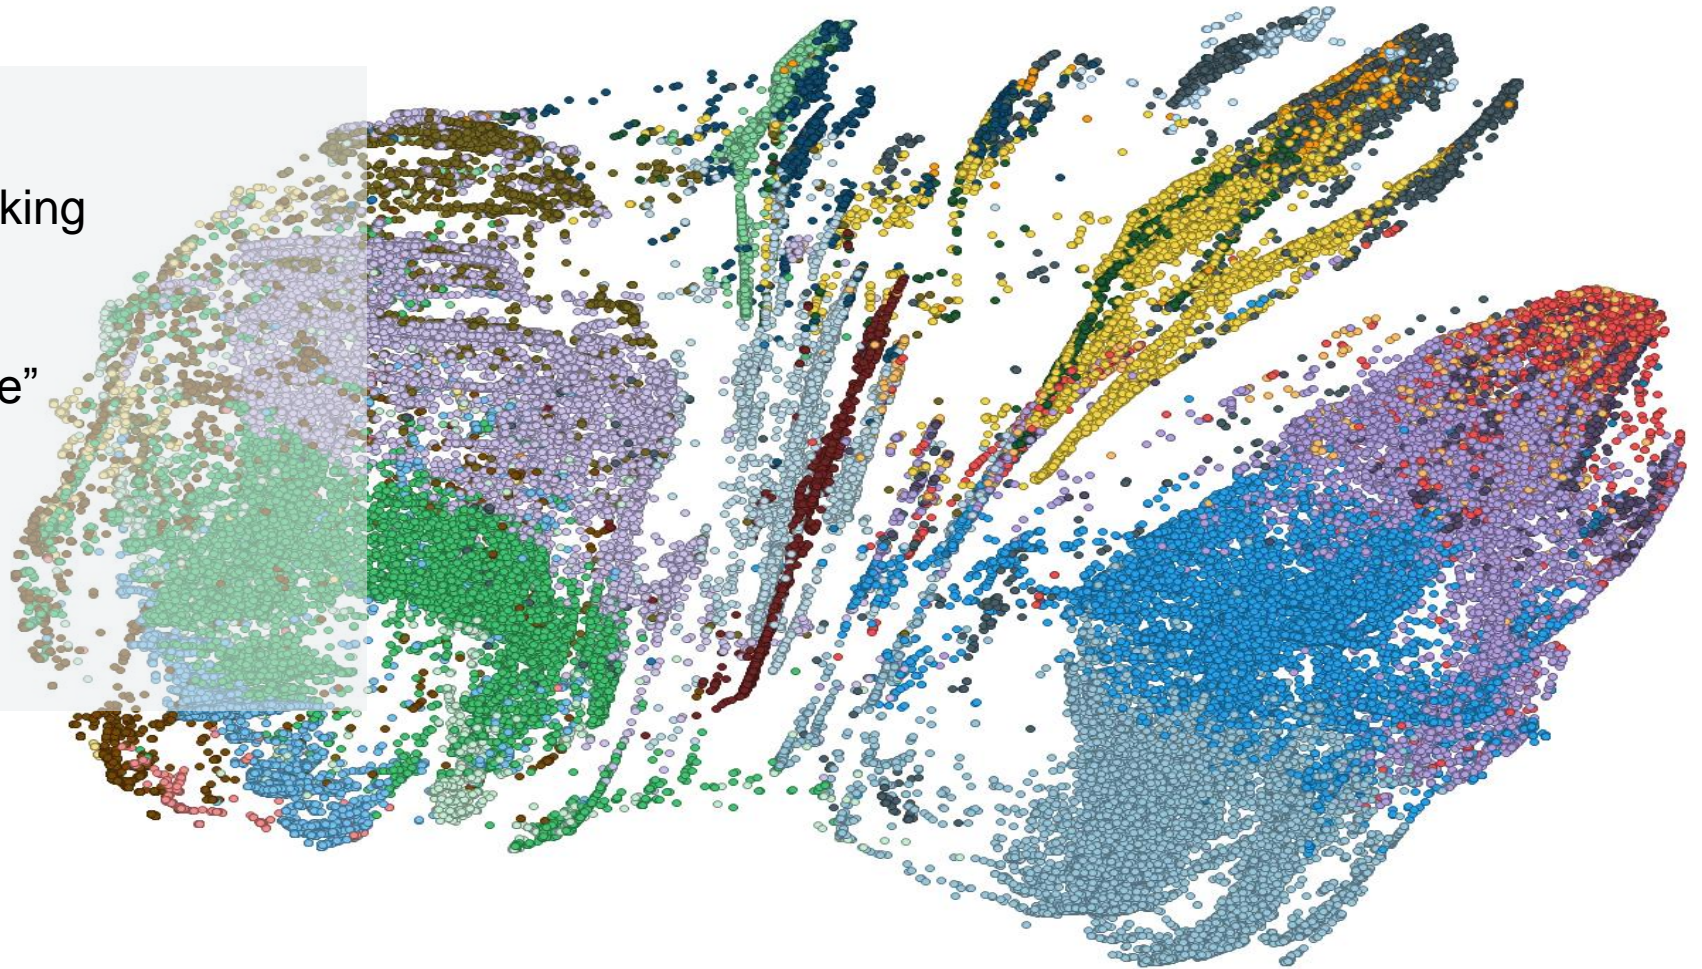

Siemens Mobility Data Services @ Signaling...

Diagnostic, Smart Monitoring, Smart Data Analysis und Smart Prediction in Signaling

Topics

- Status electronic interlocking
- Info: relay interlocking
- Info: ETCS “Infrastructure”
- Info: ETCS “OBU”
- Q & A

Example Use Case – Visualization of multi-dimensional sensor data, 91 dimensional sensor data in 2 dimensional space

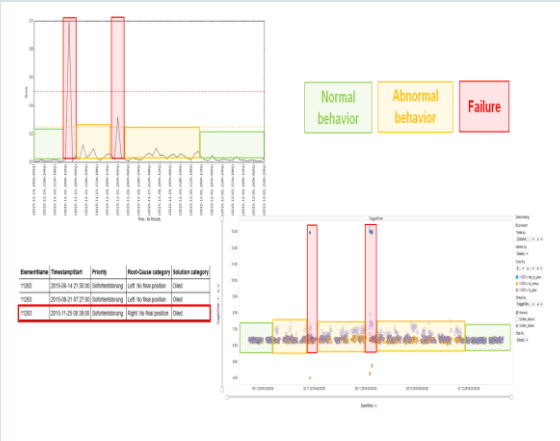

Smart Monitoring, Smart Data Analysis, Smart Prediction Interlocking (IL*) Bremen, first use cases (start)

Analysis of abnormal
pattern within the
internal IL-bus system

Short-term forecast of
switch problems

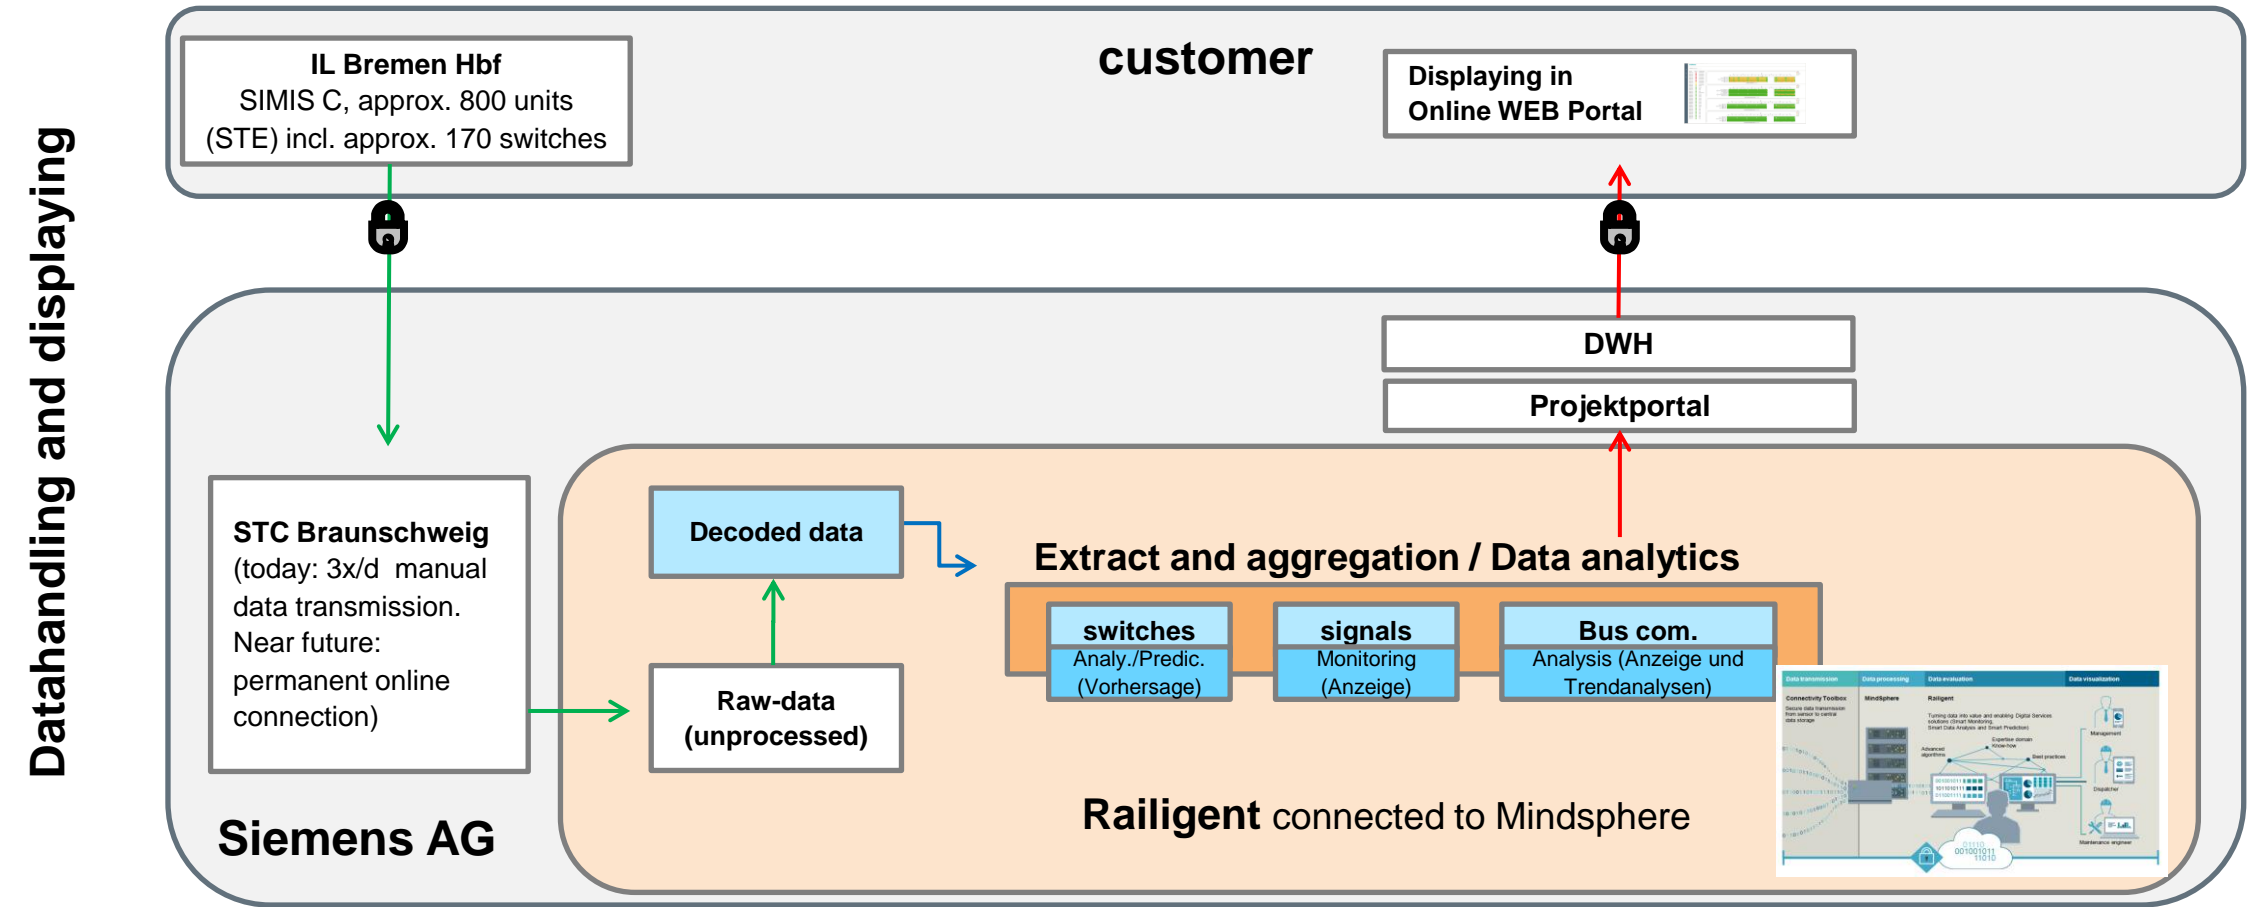

Monitoring of lamp
signal data

*= IL = Electronic Interlocking, here type Simis C

Status IL Bremen
since April 2017 „Live-Test“ (test object)

Only use of IL internal data telegrams/information. No additional sensors and/or special switch diagnostic!
„Use the existing equipment as a sensor!“

Status IL Bremen

Example Bus communication – Monitoring/Analysis

Exemplary visualization

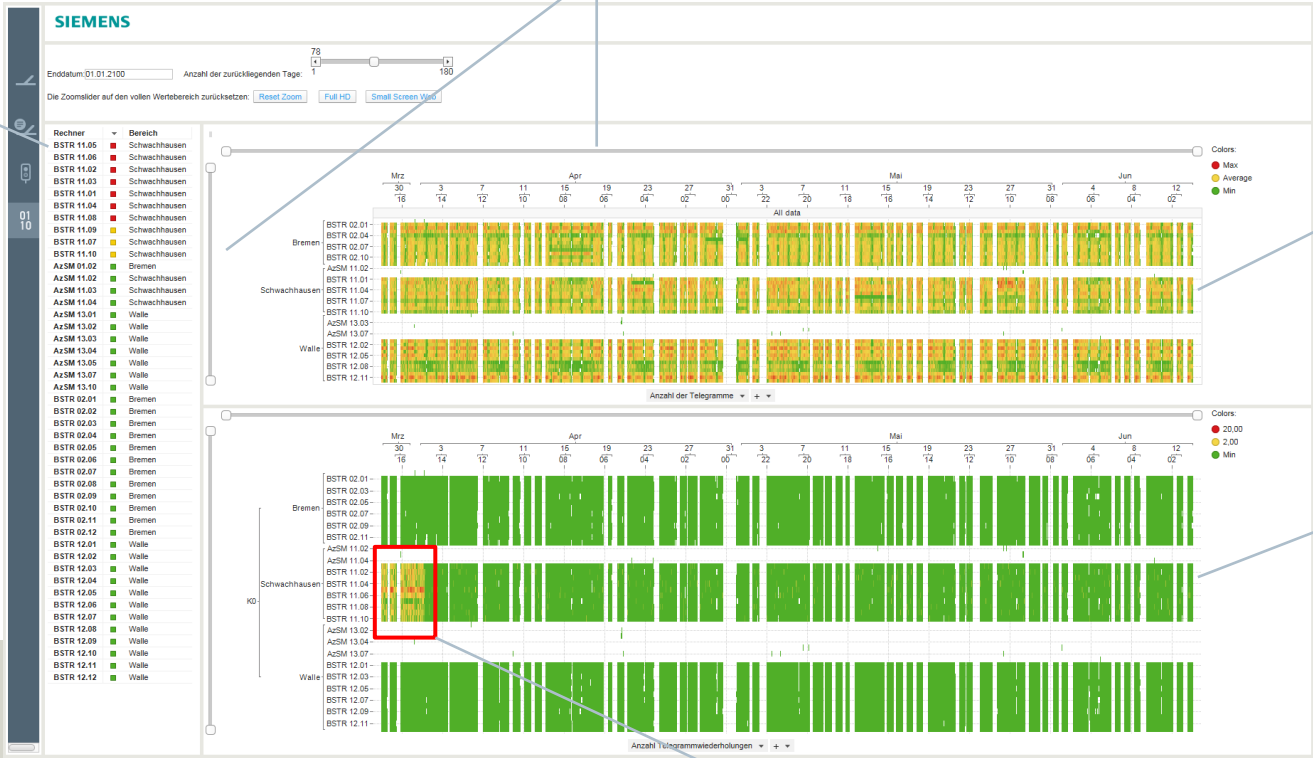

zoomslider

Traffic lights display and heatmaps

Traffic of transferred telegrammes

Telegramme repeat

Example: Defect of optocoupling unit

Status IL Bremen

Example Switch-Analysis/Prediction

SIEMENS
Ingenuity for life

Exemplary visualization

Traffic lights

Abnormal picture → switch problem,
„Pattern analytics“ for forecast of future problems

Quantity of switch movements

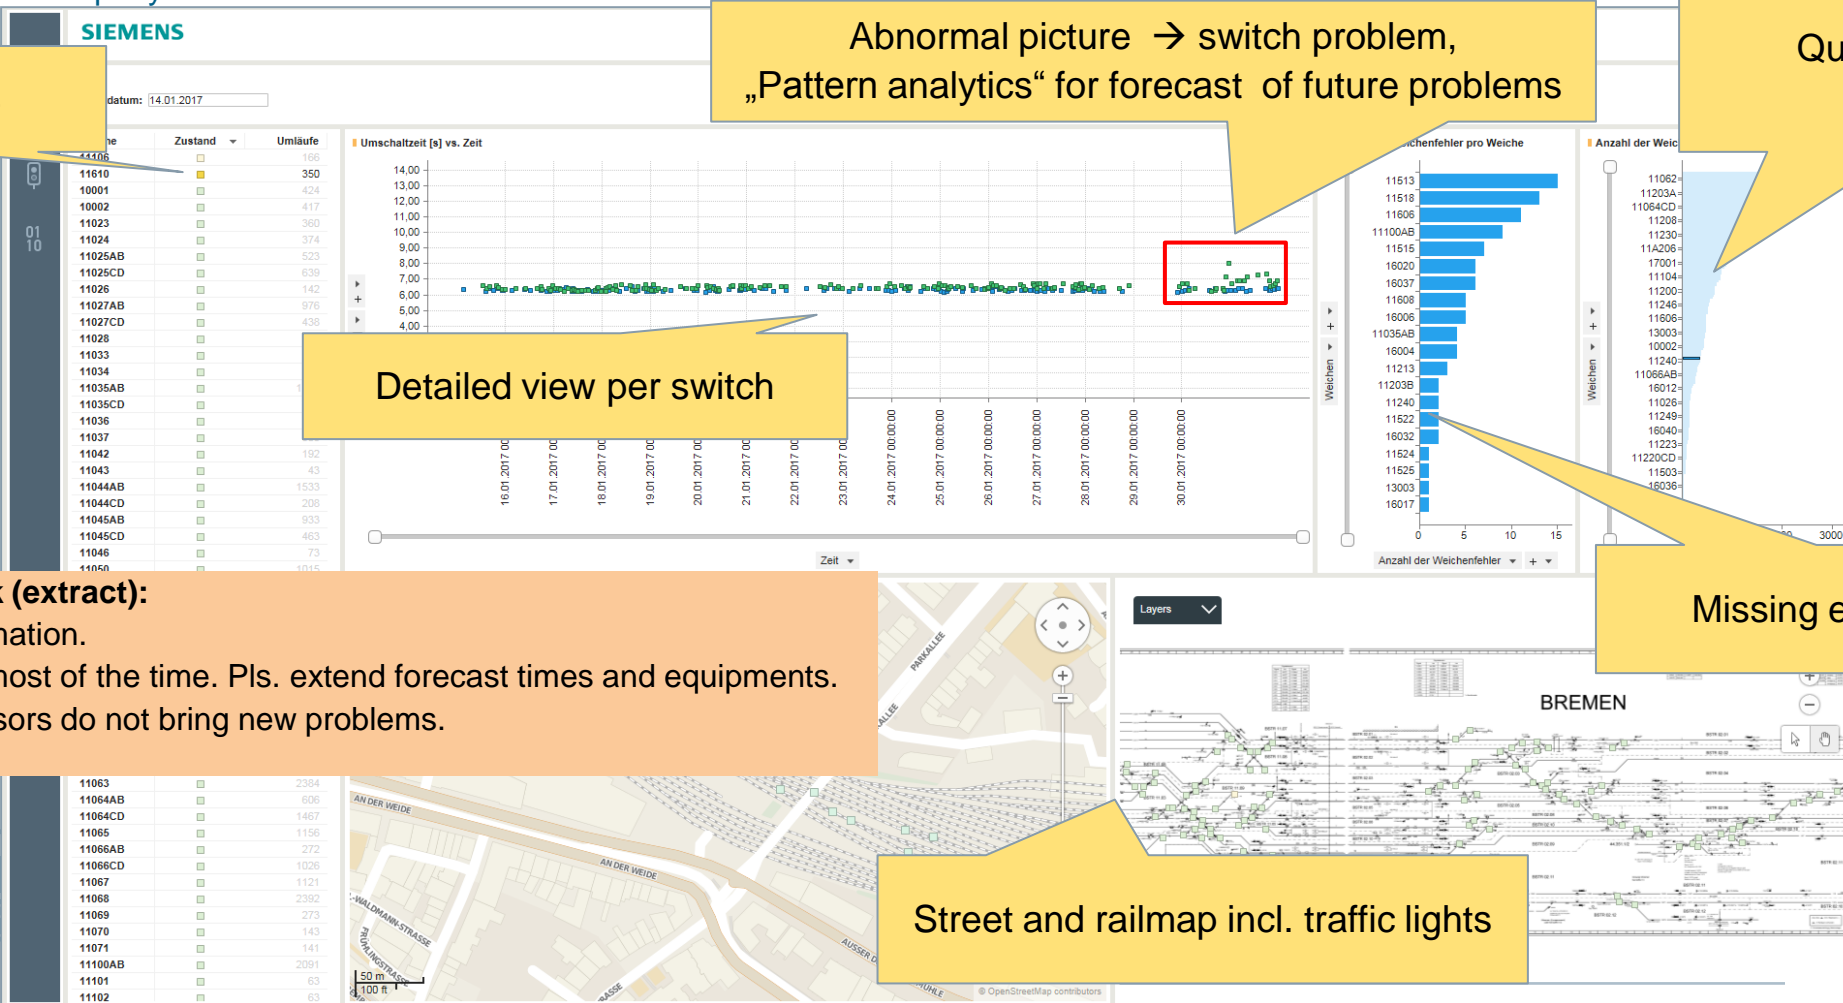

Detailed view per switch

Customer feedback (extract):

- A lot of new information.
- The forecast fits most of the time. Pls. extend forecast times and equipments.
- No additional sensors do not bring new problems.
- Etc.

Missing end position

Street and railmap incl. traffic lights

Diagnostic, Smart Monitoring, Data Analysis, Prediction „Relayinterlockings are in the world of smart data“

SIEMENS
Ingenuity for life

Customer requirements:

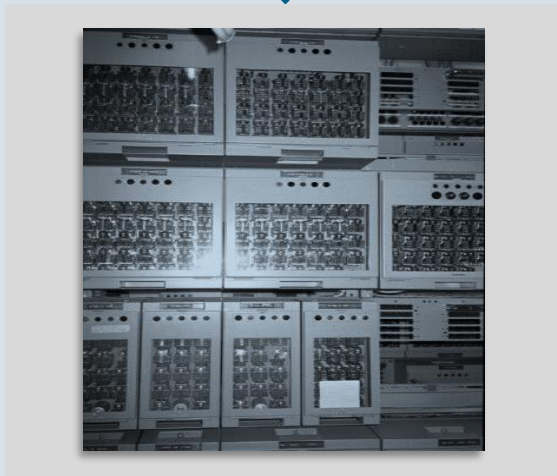

- Reduce delay minutes by diagnostics and prediction
- Optimize product lifetime, due to controlled preventive measures

Siemens technical concept,
already succesfull tested (Lab-
interlocking). First data analysed.

Next step:

Decision by customer.

Possible pilot- Bremen-Sebaldsbrück.
Approx. 130 units.

Relay interlocking type SpDrs60

Smart Monitoring, Smart Data Analysis, Smart Prediction ETCS L2 infrastrucuture, first use cases

Analysis of data transmission (maintenance)

Analysis of mode exchange (maintenance)

Sidis DA Train movement data-statistics (operation/maintenance)

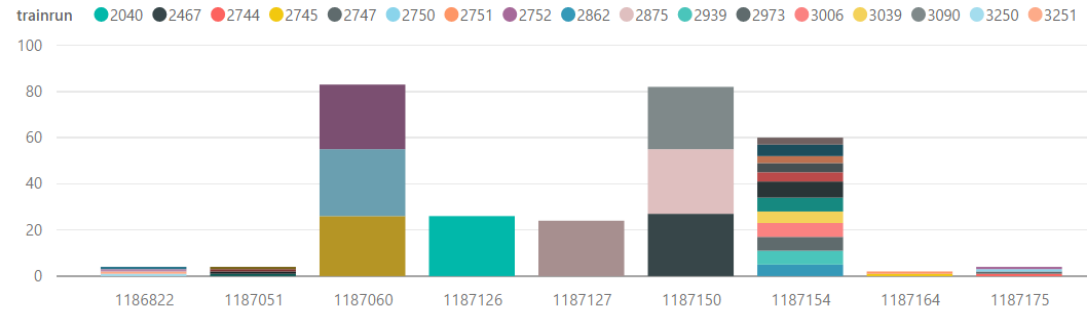

Smart Monitoring, Smart Data Analysis, Smart Prediction

Monitoring from data transmission errors (ETCS infrastructure)

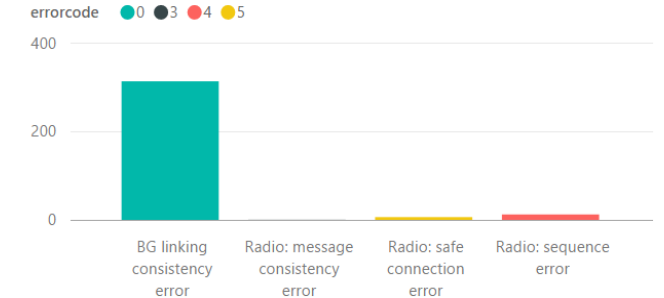

Data transmission problems (ETCS radio)

- Displaying of train information
- Displaying of problems based on km (comparison between „km and train“)

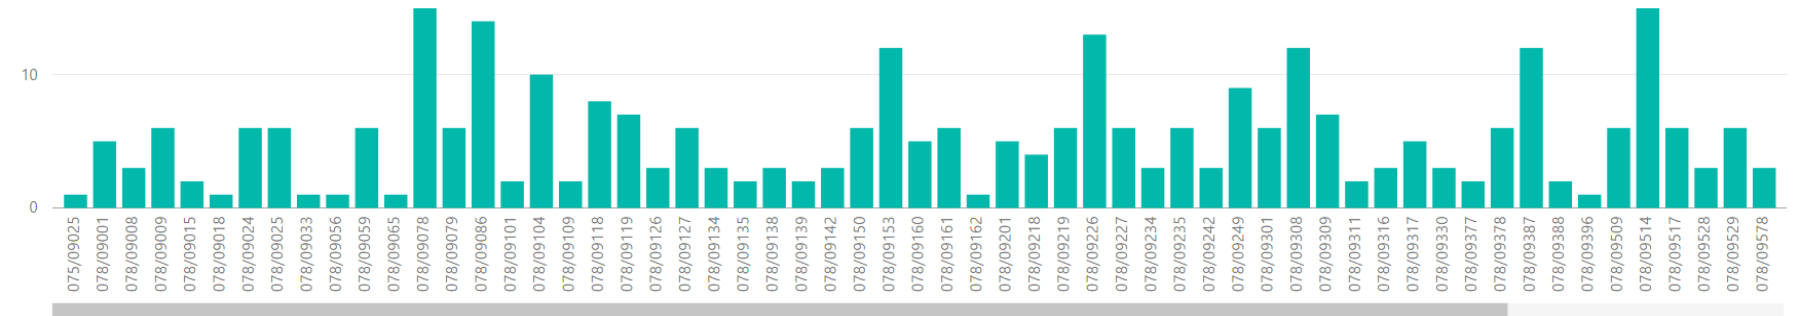

Anzahl BG linking error nach trainrun

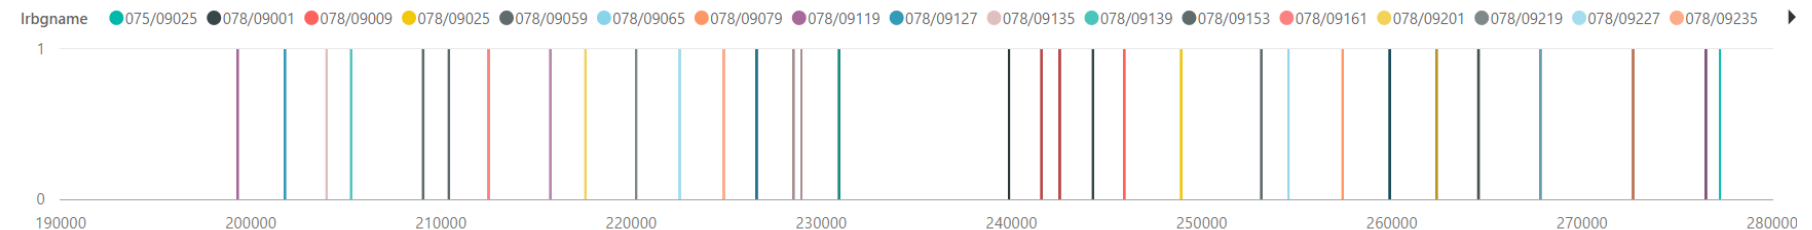

Anzahl Trainerrors nach Typ

Anzahl BG linking error nach lrbgname

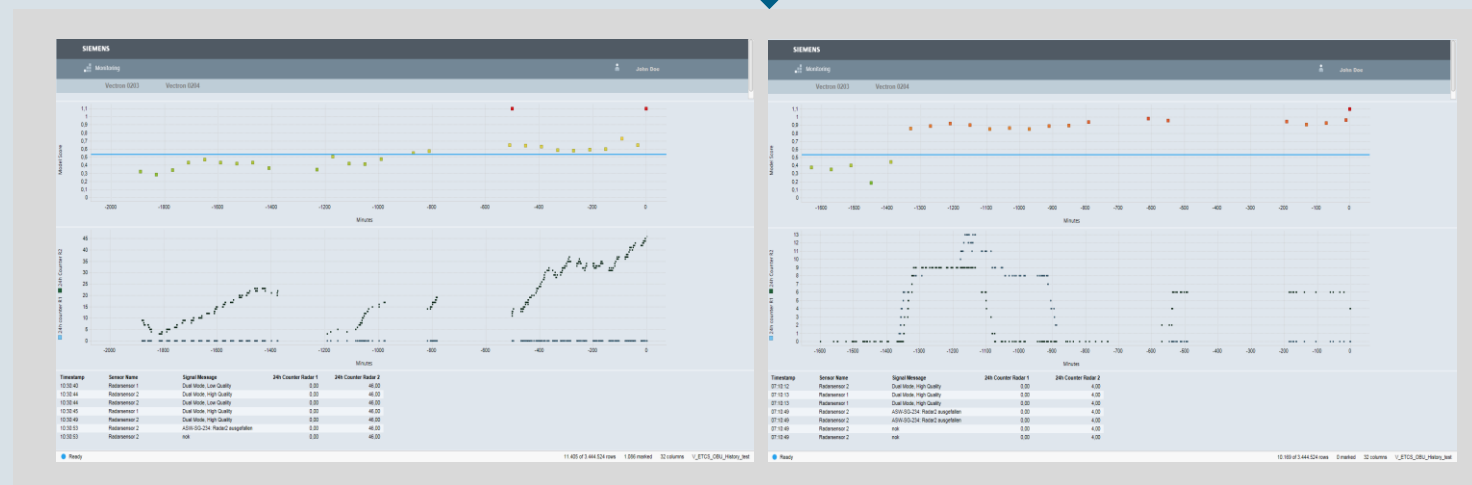

Verteilung BG linking error für 1 Zugfahrt von 1187060

Smart Monitoring, Smart Data Analysis, Smart Prediction

Analysis of transmission errors (ETCS OBU)

**Radar error:
Abnormal switch
frequency between
modes**

OBU = Onboard-unit, train equipment

If you have no question,
perhaps I did something wrong?

Please feel free to ask!!
